serveurDEDIE publishes its first connectivity measurements for UK

serveurDEDIE names Technocom, an Easynet Group company, the best UK Internet operator for serveurDEDIE connectivity. In second and third place are Janet and Nildram.

serveurDEDIE continuously monitors its connectivity to the 20 major UK operators from Washington DC. Those measurements collected from a multi-connected hosting center evaluate the accessibility of UK operators from the USA.

This first survey for the UK is based on 6-month measurements from Oct 1999 to March 2000. Based on these measurements serveurDEDIE names Technocom, an Easynet Group company, the best UK Internet operator for serveurDEDIE connectivity. Technocom achieved a 99.22 % transmitted packet rate over the period.

Janet, the network for the education and research community, ranks second and Nildram Ltd ranks third. Both obtain very similar high performance.

We can categorize operators in 4 groups based on their corrected transmitted packet rate. Two operators namely Technocom and Janet ranks over 99 our of 100 and have therefore superior quality connectivity. Eleven operators scored between 97 and 99, i.e. good quality. Six operators obtain medium quality (between 97 and 96) and 4 operators are labeled with insufficient quality (below 96).

The full report with results, graphs and raw data is available online at:

http://www.serveurDEDIE.com/stats/UK/rapports/6mois/

The next UK report to be published is the "UK 2000 report" in Jan 2001.

About *serveurDEDIE*

serveurDEDIE is a product line of dedicated Internet server hosting based on the digitalNATION, a VERIO company, service range.
